Adding apps to the MGU App Store

Recommended app repos that do **not** come bundled with the on-car Store, and the exact text to type to add each one. Bimmhacks MGU Tool · BMW iDrive 7 & 8.

How to add a source on the car

1. Install the App Store first (Bimmhacks MGU Tool → **App Store** tab), and give the car internet.
2. On the car open **Apps** → **Store** → **Settings** → **Add source**.
3. Type the text shown in the box for the repo **exactly** (owner/repo, no spaces).
4. Pick what to follow — the **Follow** line under the box (Releases, Tags or a branch).
5. The repo's apps now appear in the Store: install them from there.

iDrive 8: typing on the car only works while the Store's renderer draws the screen. If the keyboard does not come up, add the source from the Store's phone page or from the computer (Bimmhacks MGU Tool → App Store → *Add your repo to the Store*). Already in the Store, nothing to add: cauliflowermossgrape/idrive7-apps, robertnisipeanu/idrive-apps, IterioDev/car-apps.

iDrive 7 & iDrive 8

RideTube for iDrive 8 (beta)

RideTube, the unofficial YouTube client, ported to iDrive 8 (beta, not yet confirmed on an iDrive 8 car); video plays only while parked.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
waliworld/iDrive8-RideTube
```

Follow: **Releases**

Repo on your PC: https://github.com/waliworld/iDrive8-RideTube

iDrive 7 only

alexp50 BMW Apps

Fifteen full-screen apps, including Ambient Studio, DPF Monitor, Drive HUD, Telemetry Studio, Waze HUD and xDrive Studio.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
alexp50/bmw-apps
```

Follow: **Releases**

Repo on your PC: https://github.com/alexp50/bmw-apps

JustAnotherPU MGU Apps

Head-unit tools: iDrive Monitor (system monitor), wireproxy (for Tailscale) and Node.js 22.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
JustAnotherPU/mgu-apps
```

Follow: **Releases**

Repo on your PC: https://github.com/JustAnotherPU/mgu-apps

Waze HUD
Waze turn-by-turn arrows from CarPlay on the HUD and instrument cluster; it uses cluster-render from the built-in idrive-apps source.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
JustAnotherPU/waze-hud
```

Follow: **Releases**

Repo on your PC: https://github.com/JustAnotherPU/waze-hud

bimmer-lab Apps
Cluster Themes (redraws the instrument cluster) and HUD Widgets (custom HUD readouts); install cluster-render from the built-in idrive-apps source first.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
bimmer-lab/apps
```

Follow: **Branch: main**

Repo on your PC: https://github.com/bimmer-lab/apps

pinguinooo iDrive 7 Apps
Shift Lights, Engine Vitals and an M Track cluster layout.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
pinguinooo/idrive7-apps
```

Follow: **Branch: main**

Repo on your PC: https://github.com/pinguinooo/idrive7-apps

hexlay Custom Apps
A Spotify Connect controller and library browser, and M-Copilot, an AI assistant that reads vehicle data; the renderer comes from the built-in idrive7-apps source.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
hexlay/idrive7-custom-apps
```

Follow: **Branch: main**

Repo on your PC: https://github.com/hexlay/idrive7-custom-apps

Cluster Info, Layouts & Centre (eroobeeroo)
Three apps that put live data and custom layouts on the instrument cluster and HUD; the head unit builds them from source.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
eroobeeroo/idrive7-cluster-info
```

Follow: **Branch: main**

Repo on your PC: https://github.com/eroobeeroo/idrive7-cluster-info

ALSO ADD (these apps need it) — the shared parts these apps build on

```
eroobeeroo/idrive7-apps
```

Follow: **Branch: main**

Repo on your PC: https://github.com/eroobeeroo/idrive7-apps

iDrive 7 Cluster Apps (leonit-k)

The same three cluster apps (Cluster Info, Cluster Layouts, Cluster Centre) as eroobeeroo's repo above; you only need one of the two.

TYPE IN THE MGU APP STORE (Settings → Add source)

```
leonit-k/idrive7-cluster
```

Follow: **Branch: main**

Repo on your PC: https://github.com/leonit-k/idrive7-cluster

ALSO ADD (these apps need it) — the shared parts these apps build on

```
eroobeeroo/idrive7-apps
```

Follow: **Branch: main**

Repo on your PC: https://github.com/eroobeeroo/idrive7-apps

ALSO ADD (these apps need it) — the HUD / map-layout additions to Waze on cluster

```
eroobeeroo/idrive-apps
```

Follow: **Releases**

Repo on your PC: https://github.com/eroobeeroo/idrive-apps

In the list, but not added from the car

These are not MGU App Store sources, so there is nothing to type into the Store. The link is there to read about each one on your PC.

BMW Ambient RGB Controller · iDrive 7

Gives a G20's factory ambient lighting any colour: hue ring, brightness, upper and lower zones, animated modes.

Why not in the Store: built with the MGU App Kit and not published as a Store source; build and install it yourself from the repo.

Repo on your PC: https://github.com/gavincunningham2003-dot/bmw

MGU App Store (JustAnotherPU fork) · iDrive 7 & 8

A fork of the MGU App Store itself.

Why not in the Store: it is the Store, not a list of apps; the Bimmhacks MGU Tool installs the Store for you (App Store tab).

Repo on your PC: https://github.com/JustAnotherPU/mgu-store

NBT Evo ID6 apps (pre-release) · iDrive 6 (NBT Evo)

BoostDeck, ShiftDeck and MHD Maps menus built for NBT Evo head units over ENET.

Why not in the Store: made for the older NBT Evo (iDrive 6) unit, not the MGU; it does not run on iDrive 7 or 8.

Repo on your PC: https://github.com/inotbarnacle/ID6_apps_prerelease

Each app keeps its own author and licence — see its repo. List checked: 2026-11-10, from github.com/stars/waliworld/lists/bmw-app-repos.
